Operational Excellence  
in Projects

Sir Winston Churchill is quoted to say „Some think education is expensive – think about incompetence and ignorance!“ Money is earned in the running business. Projects adapt companies to the changing requirements, prepare them for the future. Or the revenue even derives from profitably conducting (customer) projects. Seems to be reason enough to acknowledge the management of projects the same way as running the business, isn't it?

Our consulting service „**Operational Excellence in Projects**“ helps you achieving good, consistent programme and project management at operative level:

- **Assess and analyze situation as is:**

Together with your project managers we assess assets and proven procedures, company specifics and interfaces, project culture and requirements. We analyse the situation as is to **detect systemic or methodological gaps or mistakes.**

- **Define goals and measures:**

In the discussion with the later users we deduce suitable measures to remedy flaws from our findings, and develop a catalogue of **necessary processes, templates and tools.** This approach ensures that problems are addressed without creating unnecessary overhead.

- **Develop standard:**

In the follow up we bundle the formerly distributed, individual knowhow together with you,

amend generic Best Practices and tailor the necessary standards to the corporate and project requirements. That way a **Corporate PM Standard with Operational Excellence** is formed which optimally supports the project teams and thus leads directly to usable results with a high buy in of the users.

- **Test and fine tuning:**

As by experience the acid test is in practice: the following weeks / projects serve to test and **fine tune the OE approaches in project management** and their interplay with the technical delivery. Our coaching ensures the continuous application of optimizations on one hand. On the other hand we already generate **Quick Wins** in the projects, e.g. by a better adherence to delivery dates and expected results, and by the **knowhow transfer** we support the participants' understanding and joy with the good PM.

- **Guiding to autonomy**

Last but not least we are happy to stay as guides in the following time to make sure that the new won knowledge can settle, and that eventual questions are answered competently. This may involve further **coaching or some audits** of single projects to see whether the processes work as expected or whether there is a need for improvements. Or we help, in cooperation with HR, with trainings and/or setting up a project manager pool, building a **Project Management Office (PMO)** which overtakes the further

development and maintenance of the PM infrastructure, supports the project managers at their work etc. The Operational Excellence is so led into internal independence, and project success becomes reproducible.

Coming back to Winston Churchill again: Your investment in Operational Excellence in projects cannot at all cost as much as your company will profit from **more targeted and efficient resource utilization, less risk, conflicts and cost, better adherence to targets and milestones, and consistency and reproducibility of results.** Not to talk about the **customer satisfaction** and the **wins at image and competitiveness** coming along with the new, reliable competence.
